University Health Care and Management System

Abstract:

In today's world we have use of technology in each and every part of the world to solve particular problem. The problem may be related with different domains. One of the problem our university is facing is we don't have a proper application that monitors university students and staffs health status. There is Health center which is providing medical treatment to the university personals. The demand for proper health monitoring tool can help students and doctors get proper medical treatment and diagnose their problems. I have come up with a solution where I can provide an android application that fulfills all the needs of students, staffs and patients.

App Name: UOHcare

Features:

1. Check symptoms and treatments
2. Check medicines
3. Order medicines/ seek Emergency
4. Talk to Doctor
5. Book Appointment etc

Application Requirements:

1. Android phone above version 7
2. Active internet connection

Additional Requirements:

1. Should be a valid registered person of University
2. Should be suffering from any diseases
3. If disease not cured, should seek with the hospital that Health Centre refers to.
